1 Ryan Meador

I've got a decent amount of coding experience. Most of it has been in JavaScript and Node.js. I've learned the basics of Python before I decent understanding of functions, data types, data structures (like tuples and sets), and if else statements. I am excited to learn about how pandas work.

I am an Information Systems major with minor in Business Analytics.

Some of my concerns for this class is the pacing. When I first signed up I was worried that I wouldn't have time to rest and step away from the computer. However class today (the 22nd) put a lot of that concern to rest.

If you had a list of GPAs your data would be Numeric (continuous to be specific).

If you had a list of majors then your data would be categorical.
